The role of entrepreneurship as the driving force of economic growth is well respected world over. Entrepreneurs shape economic destiny of nations by creating wealth and employment, offering products and services, and generating taxes for governments. Most of the studies on the role of entrepreneurship in economic growth suggest that there is a strong relationship between the level of entrepreneurial activities in a region and its rate of economic growth (Carree and Thurik, 1998 and 2002). 'The Global Entrepreneurship Monitor' has also showed in their report of 2002, that the national level of entrepreneurial activity has a statistically significant association with subsequent level of economic growth. The role of entrepreneurship is not limited only to creation of enterprises, but also results in augmenting wealth, jobs and income, which are the most direct indicators of economic development.
