Paper Preparation Guidelines

Authors are kindly invited to submit full text papers including results, tables, figures and references.

Each submitted paper can have maximum of four authors.
All articles should be original. Previously unpublished research results must be submitted.

The papers must comply with the given research paper template.
Figures must be clear. Labels must not be truncated. The text labels in the images must be clearly visible.
The authors must develop original image. The images must be of high resolution for proper rendering of the final published PDF paper and should not distort on zooming. Or the author can use Microsoft Office tools to create the images. The images need not be colorful. If need be, the author must accommodate the image throughout the width of the paper (both columns).
The authors should use the features of Microsoft Equation or suitable software to create the formulae. Images of the formulae are not acceptable.
List of references must be expanded by adding more recent journal papers to include further data sources.

The author should try to import the graphs directly from MS Excel or other tools rather than converting the graph into a bit-map image which reduces the quality of the graph.
