## Seminar 1

### "Challenges in Separation by HPLC"

The endeavor of the conference is to create the platform for fruitful interaction of the advances and globalised practices and to highlight the regulatory approaches in HPLC method development and validation. The seminar intends to disseminate knowledge and exchange new ideas amongst the pharmacy professionals from industries and academics. This is an excellent platform for the delegates from various institutes, universities and industries to share valuable information about current and future trends in HPLC separation with major emphasis on regulatory perspective with renowned scientists from reputed industries and academics.

Registration fees : ₹ 100/-  
The programme starts at 10.00 a.m.

## Seminar 2

### "Current Trends in Management of Life Style Diseases"

Lifestyle Diseases (LSD) characterize those diseases whose occurrence is primarily based on the daily habits of people and are a result of an inappropriate relationship of people with their environment. These diseases include hypertension, heart diseases, stroke, diabetes, cancer, obesity, diseases associated with smoking and alcohol (chronic bronchitis, premature mortality, etc). The disease profile of the world is changing rapidly, especially in developing countries. Approximately four out of five LSD deaths occurred in low and middle-income countries. While the global LSD burden is enormous, common risk factors are largely modifiable and therefore action can be taken to reduce the relevant morbidity and mortality. The present seminar would therefore focus on the causes; health related alarms required to be noticed at an early age, prevention and management of LSD and current research scenario.

Registration fees : ₹ 200/-  
The programme starts at 10.00 a.m.
